² Robert Arasa works with NHIF Department, Ministry of Health and is a former Intern and currently a Research Associate in the Social Sector Programme at IPAR.

³ Mary N. Nguli is a Research Assistant in the Social Sector Programme.

Abstract

Health is a basic need for all, regardless of race, nationality, social class, age, sex, etc. In Kenya, just like in many other developing countries, the health situation has been deteriorating in spite of the government having since independence directed her efforts towards tackling the twin problems of affordability and access to health care services. Beyond this, the policy position is also clear on the need to address equity and sustainability of quality health care delivery. The health sector reforms that have hitherto taken place (including introduction of NHIF, free health services, cost-sharing, exemptions and waivers, etc.) are all largely aimed at addressing affordability and access to health care services, especially among the poor. The latter often find themselves in poverty traps that deny them access to social services, consequent upon which they benefit least from health, education, food security, knowledge and information services and other basic human rights components.

This negates the policy endeavors relating to promoting poverty reduction through economic growth, access to minimum quality health care by removing barriers arising from social differentiation and concomitant stratification on basis of gender, social class, knowledge and limited or even zero participation of the underprivileged in prioritization and provision of the national service infrastructure. Past policy priorities and measures have not been effective in addressing these concerns, which relate positively to health care access potential for all. Spending to promote access to health care is crucial, given also that Kenya is a signatory to the WHO Abuja Declaration (25th April 2000). The latter requires member countries to spend at least 15 per cent of their national incomes (GDP) on health (Kenya spends 9 per cent).

The high cost of health care limits access to the services for many Kenyans, given that 56 per cent of the population lives below the poverty line (on less than one dollar a day) among whom 30 per cent live in absolute poverty. The Second Report on Poverty in Kenya reveals that 40 per cent of the poor did not seek medical care when they fell sick, mainly due to inability to meet the cost of medical care, while 2.5 per cent were constrained by distance to a health facility. Unaffordability, therefore, remains a key challenge facing the poor against access to health care. Many Kenyans therefore continue to either have no access to or cannot afford to pay for their health care needs. It is due to the failures of the past programs, that the National Social Health Insurance Fund (NSHIF) was conceptualized for implementation, with a view to providing a
